gpio_mgmt: Simulation Result

PHASE	TEST	STATUS
Phase 2	gpio_mgmt	PASS

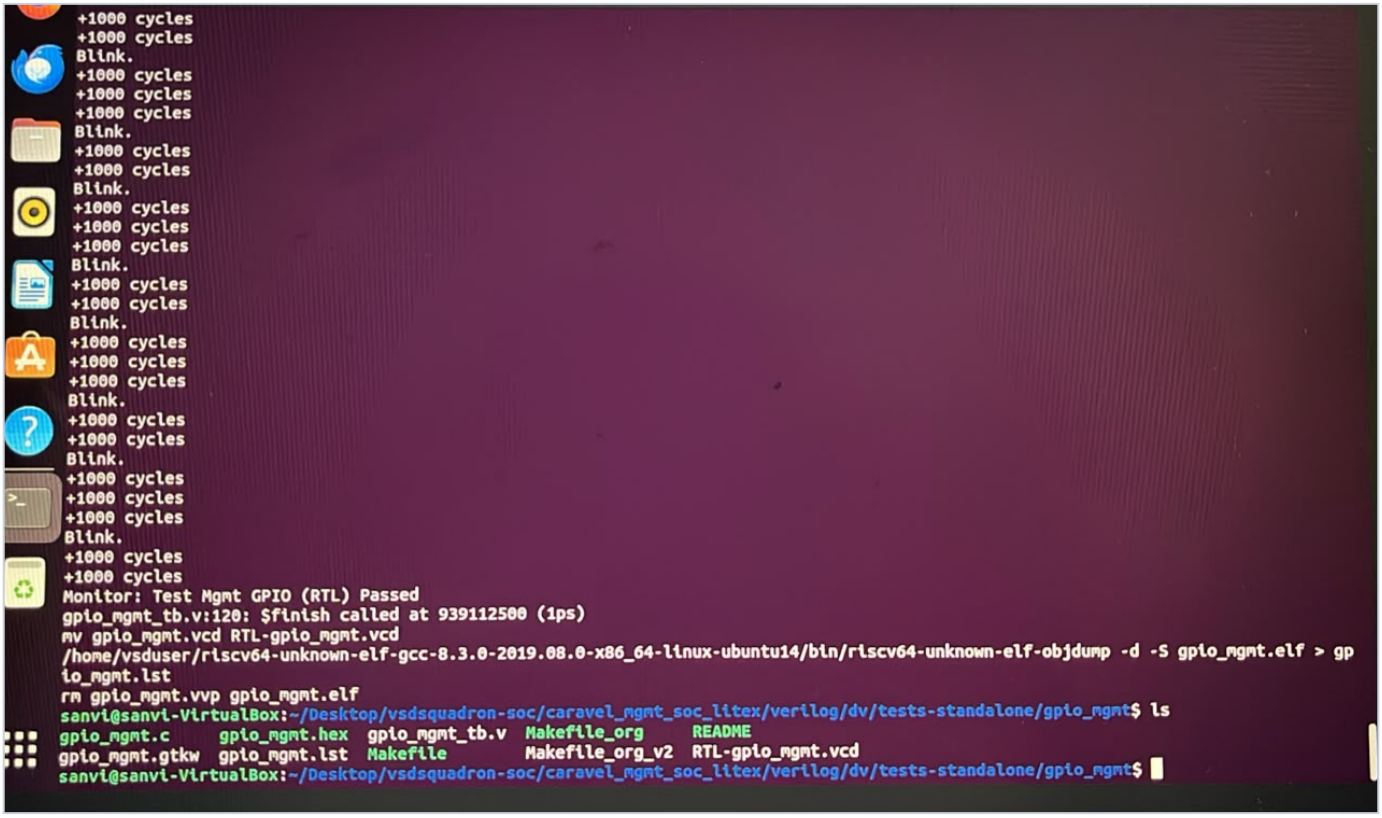

Figure 3. Terminal output of make clean; make in tests-standalone/gpio_mgmt

What this shows

- The firmware toggles one GPIO pin. The testbench prints `Blink.` each time it sees the pin change.
- Final verdict line: `Monitor: Test Mgmt GPIO (RTL) Passed`.
- The simulation ended at 939,112,500 ps (about 0.94 ms) from `gpio_mgmt_tb.v` line 120.

Conclusion. The CPU booted, ran its firmware and controlled the GPIO pin as expected.
