debug: Original Run Fails with a Timeout

PHASE	TEST	STATUS
Phase 2	debug	FAIL (timeout)

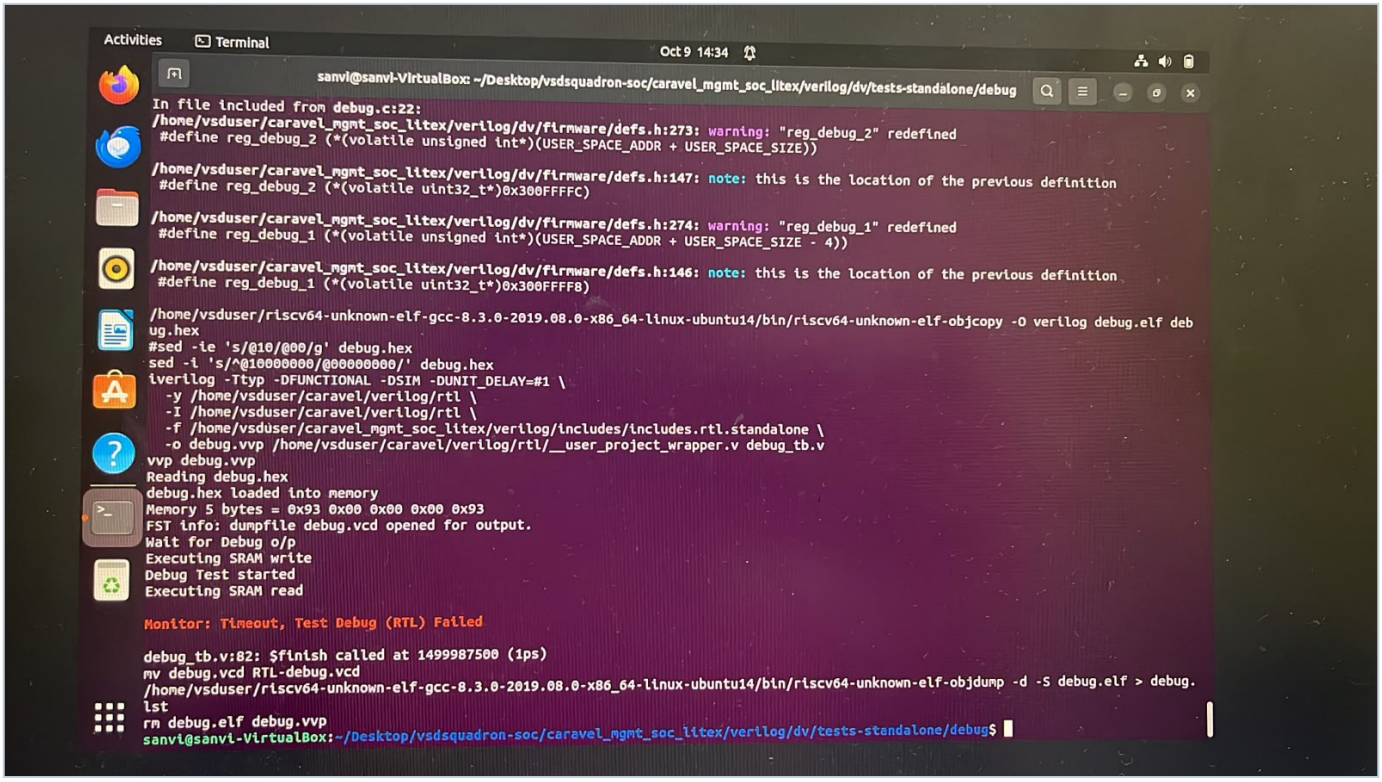

Figure 12. Terminal output of make clean; make in tests-standalone/debug (unmodified testbench)

What this shows

- The log reaches `Debug Test started` but never prints a pass message.
- Final lines: `Monitor: Timeout, Test Debug (RTL) Failed` at 1,499,987,500 ps (about 1.5 ms), `debug_tb.v` line 82.
- The warnings about `reg_debug_1/2` being redefined are harmless: passing builds show them too.

Conclusion. The test did not finish in time. Raising the limit did not help (next image).
